

# Critical psychiatry textbook

Peter C. Gøtzsche  
Institute for Scientific Freedom

## Contents

1 Why a critical textbook of psychiatry?.....	4
2 Are psychiatric disorders mainly genetic or environmental? .....	8
Schizophrenia and related disorders.....	11
Affective disorders .....	13
ADHD and the fallibility of observational studies .....	14
3 Are psychiatric disorders detectable in a brain scan? .....	18
Schizophrenia and related disorders.....	19
Affective disorders .....	19
ADHD .....	20
Anxiety disorders.....	21
Brain scan studies are highly unreliable.....	21
4 Are psychiatric disorders caused by a chemical imbalance?.....	24
Schizophrenia and related disorders.....	24
Affective disorders .....	26
ADHD .....	28
Anxiety disorders.....	28
Inflammation, one of the latest fads in psychiatry .....	28
5 Psychiatric diagnoses are not reliable.....	30
6 Psychiatric drug trials are not reliable .....	39
Rating scales .....	39
Lack of effective blinding.....	40
Withdrawal effects in the placebo group.....	40
Manipulated data analyses and selective reporting .....	41
7 Psychosis .....	43
Psychosis pills don't have clinically relevant effects on psychosis.....	43
Psychosis pills increase mortality substantially.....	46
Early intervention? Yes, but not with psychosis drugs .....	48
Psychosis pills do not prevent relapse .....	55
Organised crime and fraud pays off.....	57
The different psychosis drugs .....	59
The fairy tale of clozapine .....	61
Upping the dose, using several drugs concomitantly, and increasing deaths .....	62

Irreversible brain damage and other serious harms.....	63
Lithium and antiepileptics .....	66
Benzodiazepines.....	67
Psychotherapy and caring .....	68
<b>8 Depression and mania (affective disorders) .....</b>	<b>70</b>
Depression pills don't have clinically relevant effects on depression .....	72
Number needed to treat is highly misleading .....	78
Depression pills lead to dependence .....	79
Depression pills don't work for children and double their risk of suicide .....	81
Fluoxetine is unsafe and ineffective and the trials are manipulated .....	82
The large TADS study of fluoxetine funded by NIH was seriously misreported.....	85
Other depression pills are also unsafe and the paediatric trials are manipulated .....	86
Concealing suicide and homicide: fraud, organised crime and FDA's complicity.....	89
More about SSRIs and SNRIs causing homicide .....	101
Does the disease or the pills increase the risk of dementia?.....	103
Other harms of depression pills .....	104
Bipolar disorder .....	105
Lithium: no reliable evidence that it prevents suicide or dementia .....	106
Harms of lithium .....	110
Psychosis pills, antiepileptics and ECT .....	111
Depression pills increase total mortality substantially .....	113
Depression pills do not prevent relapse .....	114
The different treatments and combinations.....	117
Pregnancy .....	122
Psychotherapy and psychoeducation .....	124
<b>9 ADHD .....</b>	<b>127</b>
An epidemic of ADHD diagnoses.....	127
Psychoeducation and psychotherapy or drugs? .....	128
The large MTA trial and institutional corruption .....	131
Misleading textbook information and advice .....	133
Harms of ADHD drugs.....	136
We should not change children's brains but their environment .....	138
<b>10 Anxiety disorders .....</b>	<b>141</b>
<b>11 Dementia.....</b>	<b>144</b>

12 Electroshock .....	148
13 Forced treatment .....	152
14 Psychotherapy and the role of psychologists .....	158
15 Withdrawal of psychiatric drugs .....	162
16 Is there any future for psychiatry?.....	169
Censorship in medical journals and the media .....	173
More issues with unreliable diagnoses and poor drugs .....	176
The disappointing CATIE and STAR*D studies.....	180
Thomas Insel and the NIMH: A total betrayal of public trust .....	181
Final words about a specialty in ruins and what to do about it.....	189
About the author .....	194
References.....	195
Index.....	231
